# METRO Ploiești chooses EUROKLIMAT's propane solutions.

**METRO AG**, the big German cash & carry and distribution company set up in 1964 by Otto Beisheim, is the third most important international distribution group, with over 220,000 employees worldwide.

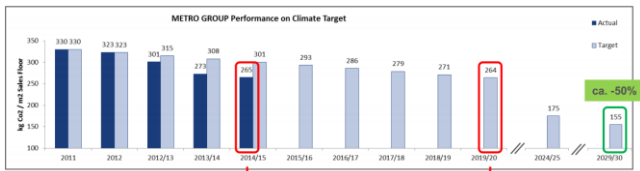

METRO-AG has implemented a **strategy to reduce emissions** with its pioneering "F-gas exit" programme, which will see the Company out of the F-gas Regulations **by 2025**, with the replacement of fluorinated greenhouse gases with **natural refrigerants** in all shops all over the world (where technically possible).

Classified in the Dow Jones Sustainability Index as the company with the best results in its field in 2015, Metro AG is recognised internationally as an **environmental leader**.

Olaf Schulze, director of the Energy and Management sector is responsible for overseeing the change from fluorinated gases to natural refrigerants.

Under his supervision, the Company has already introduced natural refrigerants in eight distribution centres in Germany, France, Poland, Spain and Romania.

An **R290** air/water chiller produced by **Euroklimat** has recently been installed in the city of Ploiești, in Romania, serving METRO's distribution centre:

With over 300 installations of chillers operating with propane, **Euroklimat** confirms its leadership position as a producer of R290 chillers.

EK Solution: R290 air/water chiller
